Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1868 Excerpt: .go much beyond one-half of it in tension. How much the available difference is, in, the present state of our knowledge of the manufacture and treatment of the material, will only be shown by careful experiment to discover the steel best suited for each use. Enough is known, however, to assure us that the limit of elasticity is higher in compression than in tension, and if it were no greater, we cannot avail ourselves of more than 50 or 60 per cent, of this limit in tension, while the whole of it can safely be utilized in compression. I will now proceed to examine whether there be any conditions involved in the use of the upright ribbed arch that will counterbalance the advantage to be gained by using the material in compression. This investigation involves the inquiry, firstly: will the structure require more material by using the upright arch than the suspended one; and if so, how much more? And secondly, will its construction and erection be more costly? Ficll If the upright arch, A B, and the suspended one, O D, (Fig. 11) be each supported upon the points E E, and are each of the same form and weight, the compressive strain throughout the upright arch will be exactly equal to the tensile strain throughout the suspended one. The weight of the upright arch will exert no more power to force the points E F asunder than the weight of the suspended arch can...
