He suggests how this might be ascertained by allowing the same load to act in the same manner but for different periods on a number of like plastic blocks, in which a series of points had been previously marked by a three-dimensional wire netting placed in the molten metal. He notes also other methods likely to give the same result. In the course of the note he refers to the simple cases of plasticity solved by Levy, Boussinesq and himself: see our Arts. 255--61. At the end are a few lines from Tresca, who recognises the importance of the experiments proposed by Saint Venant, which, I believe, he did not live to undertake. 268.
