A large butterfly valve (eighteen inches in diameter), attached to an air flue, was also exhibited. This, likewise, was actuated by the thermal conditions of the room. Upon the boiler plant of the exhibition was placed a large whistle, actuated by this device. It is blown by touching a button in the superintendent s office. Other uses of this invention are included, such as the controlling of refrigerating machinery, steam pumps, elevators, rudders, etc. This instrument was examined in its working and found to be entirely satisfactory. When the electric valve is used to control temperature a thermostat is employed. It consists of a thin long plate of hard rubber, and a similar one of steel, the two lastened together the entire length. The compound plate, thus made, is fixed at one end while the other plays between two contacts which...
